**E-mail:** jean-yves.autie@interieur.gouv.fr

**Description :** Worldwide parcel transportation company. Service provider in specialised transportation, logistics, capital and e-commerce.

## Le SIVEP de Toulouse Blagnac

The border inspection post (BIP) and the EU entry point (PEC) at Toulouse-Blagnac Airport have now been combined to form one veterinary and phytosanitary service (SIVEP). This service functions as a border post that is part of a national body and is linked to the French food safety authority (DGAL).

This structural change does not change the defined procedure for official veterinary controls (at the BIP) and phytosanitary controls (at the PEC):

- For phytosanitary controls, import notices must always be sent by fax or by messaging service at least 24 business hours before the goods arrive.
- For veterinary controls, import notices must be carried out by telephone at least one business day before the consignment physically enters French territory. In addition, the person responsible for loading must send pre-notification (on the 1<sup>st</sup> page of the CVED) via the TRACES system at least one business day before entrance of any physical consignment, and this computerised statement must be followed by submission of a printed document no later than one day after the consignment has entered French territory.
